Summary

Full-Stack Developer with 2 years building scalable React, Next.js, and Node.js apps for EdTech/FinTech. Delivered dashboards and systems driving ₹30L+ monthly transactions and 3,000+ onboardings.

Experience

Full Stack Developer, *Volvrit IT Company* - Delhi   Nov 2025 - Feb 2026
- Delivered internal tools, SaaS platforms, and mobile app backends across multiple projects.
- Integrated AI automation features (e.g., interview workflows, analytics) into live systems.
- Managed project tasks, requirements, and sprint deliveries within a 12-developer team.
- Developed and optimized scalable backend APIs and responsive frontend modules.

Frontend Developer, *Cloud Ingenious* - Remote   Jul 2024 - Aug 2024
- Converted Figma designs into a fully responsive website using React and Next.js, collaborating with a 4-person team for end-to-end development and deployment.
- Maintained SEO scores at 90-100% through optimised meta tags and structured data, while ensuring 98%+ site availability across 100+ countries via AWS S3 and CDN.

React JS Developer Intern, *StarOps Technologies* - Remote   Nov 2023 - May 2024
- Shipped EdTech, admin, and loan processing dashboards with React and Node.js integrations, driving ₹30L+ monthly transactions and 3,000+ partner onboardings in 4 months.
- Accelerated development velocity by 30% by architecting a reusable UI library and Figma-integrated design system.
- Automated loan eligibility checks by developing frontend components that integrated with bank APIs for real-time validation and processing.
- Boosted application performance by 40% through code splitting, lazy loading, and S3-optimised image delivery, achieving 15% faster load times.
- Collaborated with cross-functional teams (sales, finance, founders) to launch iterative features for team's use case.

Frontend Developer, *Gateway Car Rental* - Remote   Jan 2023 - Aug 2023
- Increased booking engagement by 40% by building a React-based booking site from scratch, incorporating dynamic UI elements and user flows.
- Streamlined rental pricing and availability calculations with custom React logic and calculators.
- Transitioned from initial design tasks to leading frontend development, delivering UI components that supported scalable rental management.

Projects

CodeSail Analysis Extension for VS Code   GitHub | Demo
- Developed a TypeScript VS Code extension for advanced code analysis and planning.
- Added features for efficient code planning, analysis, and bug-solving support.
- Ensured seamless integration with GitHub in VS Code for a developer productivity boost and management.

HourStack with Github CI/CD Pipeline   Github | Demo | Article
- Full-stack Next.js application for time tracking with user authentication, RBAC, and client/project/task management powered by Redux Toolkit for state management.
- Integrated Razorpay for subscription handling and premium features. Deployed scalably with Docker, GitHub Actions, AWS EC2, and NGINX for production reliability

Skills

Languages: JavaScript | TypeScript | Python | Bash | HTML | CSS
Frameworks & Tooling: React.js | Node.js |Express.js | MongoDB | Next.js | Vite | Jest | React Testing Library
DevOps: AWS (EC2, S3, Elastic IP) | Docker | Git | GitHub Actions | GitLab CI/CD
Interest: Machine Learning | Aerospace |Teach | AI Automation
